PROJECTS

Lions Club (PHP/Laravel)

The Lions Club project, one of the most popular clubs in India, is designed to calculate and track points for each club based on a rule-based system. It stores comprehensive details of the club members and facilitates an easy-to-use form submission process for club heads. These forms are used to evaluate and record points according to specific rules, streamlining the point allocation and member management processes for the organisation..

LaunchPad (PHP)

LaunchPad is a widely popular video and photo contest platform. It enables users to participate in various creative contests by uploading their multimedia entries, fostering community engagement and competition through voting and rankings.

BetterClinics (PHP,Codeigniter)

Better Clinics is an online practice management software for health & fitness professionals. Its features are appointment scheduling, online booking, customer management, invoices, marketing, and team management. One can easily access their clinical information securely from anywhere.

Leave Management System Xminds(PHP,Laravel)

Leave management system helps in recording, managing, and tracking employees' time-off requests. Its main objective is to handle employees' leave requests impartially while ensuring that the employees' absence from work doesn't adversely impact the business.

Publisher Portal - Binu App (PHP,Symfony)

Publisher portal is the system used to control the different types of apps and companies in Binu app.The main perspective of Binu app is to sell internet data by watching advertisements like video contents.

Moya Video Adserver PHP / Symfony - Moya Video Adserver is a platform designed to facilitate the upload of advertisements, enabling users to earn free data. The project aims to connect advertisers with users by providing a seamless interface for ad submission and management, ultimately enhancing user engagement and incentivizing data access.
